

BELARUS: A PROFITABLE, EXPORT-ORIENTED DAIRY ECONOMY

Belarus has developed dairy production as a large-scale, industrialized sector supported by substantial processing and export capacity.

Milk and dairy
self-sufficiency

Ministry of Agriculture
and Food of Belarus

High domestic self-sufficiency, modern production infrastructure and a substantial milk-processing base support both domestic food security and sustained dairy exports.

GLOBAL EXPORT POSITION

According to the Belarus Ministry of Agriculture and Food, Belarus holds leading reported positions in international dairy trade:

**No. 3 – condensed milk
and dry whey**
No. 4 – cheese
No. 5 – butter

Belarus combines large-scale milk production with a mature processing industry, substantial production surplus and established export channels. Green Step is positioned within an existing dairy ecosystem rather than having to create a new market for industrial milk production.
