

INVESTMENT SNAPSHOT

Green Step is a substantially built industrial dairy project in the Minsk Region of Belarus.

Construction has been developed for an operating configuration of approximately 1,600 milking cows, with site capacity for future expansion to approximately 2,300 milking cows.

The existing platform already includes the principal dairy buildings, milking facilities, young-stock and dry-cow barns, feed-storage structures, utility infrastructure, workshop and warehouse capacity required for a large-scale dairy operation.

The current opportunity is to complete, equip and commission this existing platform for commercial milk production.
